Subject: Jerika Mine M/045/013

I talked to Mark Sensibaugh (Uinta NF) this morning after our discussion as to whether this mine could be downsized to a small mine category due to the initial lack of disturbance. (Mr. Prestwitch is claiming that there never has been more than five acres of disturbance.) While the actual disturbance was only shown as 2 acres (to be expanded to 4 in 1981) the 1981 Notice indicates 60 additional acres of disturbance attributed to an access road. The mine was initially permitted in Feb 1980 by Getty Minerals at which time more than 2 acres was considered a large mine.

Mark stated that he is presently reviewing this file and was unable to contact Mr. Prestwitch due to the age of his files. I gave him a recent address and he indicated that he would like to set up a site visit with DOGM, the forest service, and Mr Prestwitch to verify the disturbances. He also indicated he plans to request a new plan of operations or closure of the site by reclaiming the site. I will notify you of the meeting date once I hear from Mark.
